

Adoption surged, but the jobs gap widened

AI adoption nearly doubled after 2022-Q4 while job creation covered only half of displacement.

30.65%

AI Adoption

586,785

Jobs Displaced

296,355

Jobs Created

Net Employment

\$61.65M

Reskilling Spend

4.26 / 10

Risk Index

Adoption accelerated after 2022-Q4 while displacement stayed above creation

KEY INSIGHT

AI adoption rose from 20.37% before the generative-AI era to 38.61% after 2022-Q4, while job creation coverage fell from 53% to 49%.

POLICY SIGNAL

Reskilling must target exposure, not adoption alone. The global net employment gap is -290.4K jobs.

Ranked country comparisons reveal funding gaps

Country and region views use ranked comparisons so the policy signal stays readable.

Countries ranked by jobs displaced

Reskilling investment by region

Creation coverage by tier

Regions: adoption vs displacement risk

High-displacement industries need more than high adoption

Food & Beverage leads displacement, while several exposed industries show weak reskilling intensity.

Industries ranked by displaced jobs

Risk vs reskilling spend per displaced job

Largest employment gaps

WATCHLIST

Food & Beverage: 62.7K displaced.
Media & Entertainment: about \$11 per displaced job. Manufacturing: high exposure with low reskilling intensity.

Manual and administrative work carry the widest transition gap

Skill groups show where policy should distinguish replacement risk from augmentation potential.

Employment gap by skill category

Adoption vs displacement risk across skills

Reskilling investment by skill

READOUT

Manual Skilled Trades show the largest employment gap at about 60.5K. Manual & Physical has the highest average risk. Technical & Digital has high adoption and risk, so it should be treated as both augmentation and displacement exposure.

Target reskilling where exposure outruns support

Allocate funding by displacement volume, risk, and spend per displaced job rather than adoption alone.

Priority matrix: risk vs reskilling intensity

Industries with the largest net employment gaps

1. Fund low-coverage displacement first

Prioritize Media & Entertainment, Manufacturing, Professional Services, Food & Beverage, and Education because displaced jobs are high relative to reskilling spend.

2. Build skill bridges

Manual Skilled Trades, Manual & Physical, Administrative & Clerical, and Managerial roles need targeted transition pathways.

3. Monitor post-GenAI acceleration

Use quarterly tracking to detect whether job creation coverage improves or keeps falling below displacement.
